Abstract (en)
[origin: EP0420037A2] The invention relates to a lock (V) on solid-walled doors (1) especially of motor caravans (2), having an inner lock (3), with an inner handle (7) for actuating and blocking a latch bolt (6), and having an outer lock (4), with a bolt retraction handle plus a lock cylinder (21) for actuating the bolt catch (Sp) of the inner lock; to achieve an especially simple solution of practical benefit, it proposes that the bolt retraction handle be designed as a pivoting grip lever (S), be mounted on a journal (33) to be fastened through the wall, and with its opposite end (b) project with only hook like engagement into the outer-lock case (25) to be fastened flush on the door and be located in front of a shoulder (43) of an intermediate lever (40) which is mounted pivotably in the outer-lock case (25) and which has a take-up projection (46) pivoting in the direction of the bolt displacement. <IMAGE>
