Abstract (en)
The present invention relates to a re-sealable dispenser-container comprising a main container body made of three impervious sheet-like materials, the peripheries of which are sealed together in a superimposed condition so that two spaces (11, 12), one containing wet and one containing dry tissues for cosmetic or toilet use are formed, with one opening, a flap (3) having a pressure-sensitive adhesive surface and fixed to the main body at one end thereof to cover the opening, and a non-adhesive member (5) adhered to the adhesive surface and which member is used for closing the opening in order to prevent the adhesive surface from directly contacting the wet tissues contained in the space for the wet tissues.
