Abstract (en)

[origin: EP0420750A1] The invention relates to an insulating composite panel consisting of two sheets (1, 2) and an alveolate internal structure (3) of the honey-comb type. The alveoles are filled with mineral-wool flock particles, the ratio of the size of the alveoles to the average diameter of the flock particles lying between 50/1 and 1/1 (unity), and preferably being approximately 10/1. <IMAGE>
