Abstract (en)

[origin: EP0421311A1] 2.1. In sliding packages, one box part (17) is situated with a group (11) of cigarettes, surrounded by an inside covering (12), in a box part (17) which is open at the top. Said box part can be displaced in a sleeve (18) which is open on one side (opening 29). An opposite side wall (30) is closed apart from an actuating opening (41). <??>2.2 For machine production of such packages, the sleeve (18) is constructed in such a way that it can be folded flat in an intermediate folded position. In said intermediate folded position, side flaps (39, 40) for forming the side wall (30) of the sleeve (18) extend in the plane of the front wall (32) and the rear wall (33). <IMAGE>
