Abstract (en)

Procedure for the intermittent performance of an after treatment of a strip (1), according to which the strip (1) is moved intermittently in its longitudinal direction in relation to an instrument (6 or 15, 16) and between two successive movements and therefore with stationary strip (1) in relation to the instrument (6 or 15, 16) the after treatment is performed by pushing the strip against the instrument with a pressure wheel (7), that is moved in the transverse direction of the strip (1) and opposite the instrument (6 or 15, 16), characterised in that the strip (1) is pressed with the pressure wheel (7) against the instrument (6 or 15, 16) by means of an at least relatively hard band (14) which at least during the after treatment is held stationary in relation to the instrument (6 or 15, 16).
