Abstract (en)
[origin: EP0421976A1] An envelope (1) has a closure flap (5) which is attached on the opening side to the one envelope wall, the front wall (2), can be folded over towards the other envelope wall, the rear wall (3), and can be stuck down when it has been folded over onto the rear wall (3) by means of an adhesive label (9) which is stuck over a cutout (8). In order to obtain a printing region which is unimpaired by the cutout (8) with rational manufacture, the cutout (8) is located in the rear wall (3) and the adhesive label (9) is stuck over the cutout (8) from the inside of the envelope, the front wall (2) having a separation coating (11) on the outside in its region opposite the cutout (8) or the cut-out part (12) being suspended detachably in the cutout by connection webs (14) which interrupt the peripheral cutting line (13). <IMAGE>
