Abstract (en)

[origin: WO9000298A1] To program a communication device (14) to respond to voice commands (16, 32, 34), an individual desiring to operate the communication device sends a message (38) to a repository of voice recognition codebooks. The repository device(s) respond by transmitting the codebook of that individual to at least one communication device, which stores the codebook therein (26). Thereafter, the communication device may respond to the voice commands of the individual.
