Abstract (en)
[origin: EP0422306A1] A thin communication cable (10) intended for frequencies up to and including the MHz-region. The cable which has a small diameter should be non-sensitive to moisture from an electric point of view. It is provided with at least two electric conductors (12) with surrounding sheath (20,22,24). Particularly said sheath is composed of three different, mutually assembled layers - one internal layer (20), one external layer (22) and one intermediate layer (24) - said intermediate layer (24) consisting of a semiconductor material.
