Abstract (en)

[origin: EP0422563A2] The invention proposes a method for force-opening a pile (53) of sheets (52), in which the pile (53), resting on a support (7), is bent out of the starting plane formed by the position of the support (7), a pressure element (40) is applied, at least in the region of one front side of the pile (53), to the pile (53) on its side facing away from the support (7), and, with the pressure element (40) acting, the support (7) is moved in the direction of the starting plane. The invention also relates to a device for carrying out the method.
