Abstract (en)  
[origin: EP0422578A1] Apparatus (1) for laying sleepers of a track with a portal frame (2) which is movable on gauge rails (7) and has a longitudinal support (3) and with a height-adjustable sleeper-holding device (5) designed for lateral contact at both sleeper ends and, arranged in the longitudinal end region of said device on the longitudinal support (3), a sleeper-setdown device (4). A sleeper-hauling device (21) is provided, which is designed for contact on one longitudinal side of a sleeper (22) situated on the sleeper-holding device (5) and which is designed to be longitudinally displaceable over the entire longitudinal region of the holding device (5) by means of a drive (24) in the direction of the sleeper-setdown device (4) arranged at the end side. <IMAGE>
