Abstract (en)
[origin: EP0422867A2] A control and/or display panel arrangement comprising: a planar frame structure (1) of grid form which supports on one side (7) thereof a mosaic arrangement of tiles which forms a display; and a plurality of modules (11) supported on the other side (9) of said frame structure (1) each of which provides a further part of said display on said one side (7) and/or a control function associated therewith. Each module (11) is supported on the frame structure (1) by way of at least one pair of first (15 or 17) and second (33, 39, or 33, 43, 39) complementary parts which are fixed one (15 or 17) to the module (11) and the other (33, 39 or 33, 43, 39) to the frame structure (1) and which slidably engage, thereby to permit selection of the position of the module (11) with respect to the frame structure (1) in a direction perpendicular to the plane of the frame structure (1).
