Abstract (en)

A method of preparing a light sensitive silver halide photographic material comprising a support and at least one silver halide emulsion layer, which method comprises coating the support with at least one composition to provide a layer having a surface temperature of not higher than 19 DEG C when a weight of water in the layer is from 2 to 8 times the weight of binder in the layer, and drying the light sensitive material for not less than 35 seconds to obtain a weight of water in the coated layer of from 2 to 8 times the weight of binder in the coated layer.
