Abstract (en)
[origin: EP0423637A1] The closure clip (10) is made of elastic plastic for closing bags made of plastic film for packaging purposes and the like which have two clamping arms (14; 16) which are connected to one another so as to be swivellable in the region of one of their ends in each case and are provided in the region of their other end in each case with catch elements which can be brought into detachable engagement. The clamping arms (14; 16) each have a limb portion (18; 22) extending spaced apart and essentially in parallel in the closed position of the closure clip (10). Projecting from the flat side facing the other clamping arm limb portion (22, 18) in each case of at least one of the clamping arms is a clamping extension (20), whose height, measured from the assigned limb portion, is selected such that the clear spacing, present between the limb portions (18, 22) in the closed position, is at least largely bridged by the clamping extension (20) or the clamping extensions. <IMAGE>
