Abstract (en)

[origin: EP0424297A1] The invention aims to carry out marking of grounds, particularly sports grounds such as football pitches, rugby pitches, etc., which is resistant to bad weather and to trampling, while meeting a certain number of requirements relating for the most part to player safety. The method according to the invention consists in hollowing out a cavity in the shape of the line to be produced; in filling it by forming therein an aggregate consisting of rubber in small pieces and of a binder preserving a flexible state, such that the pieces of rubber are coated only partially; and in painting the surface of the said aggregate with the desired marking. Advantageously, bitumen or derived products are used as binder, and recycled rubber in the form of chips. The invention also relates to devices for implementing the method. <IMAGE>
