Abstract (en)
[origin: WO9000788A1] A self adhesive label (2) has a layer (4) of polymeric material such as polypropylene or polyethylene, the first layer (4) being printed on one face (12) and having an adhesive material (6) on its other face. The upper surface (12) of the layer (4) is printed using u.v. activated inks. A transparent second layer (14) of polymeric material such as polypropylene or polyethylene is laminated to the upper surface (12) of the first layer (4) by means of an adhesive agent (16), which is preferably an u.v. activated adhesive agent. The label (2) may include a removable backing sheet (8) which is removably adhered to the adhesive material (6) on the other face of the first layer (4). A silicon release layer (10) may be located between the backing sheet (8) and the adhesive material (6) on said other face of the first layer (4).
