Abstract (en)  
[origin: EP0424560A1] Installation module for sanitary devices with a foamed supporting structure in which the elements required for supply to and removal from the sanitary device are embedded, with fixing connections on the one hand for suspension or installation of the supporting structure and on the other hand for suspension of the sanitary device. The supporting structure is made up of longitudinal and transverse sections plugged together and held together by the foamed material, advantageously two profiled side supports (1) adjacent to the sides of the installation module, which supports are connected in the base area of the installation module by a plugged-in transverse section (2). As a result of its profiling and incorporated recesses/slits (7,8), the plugged-together in profile supports form an essentially angularly rigid supporting structure. <IMAGE>
