Abstract (en)

[origin: EP0424574A2] In order to offer a completely novel type of design for a structure for the shading of the interior of triangular, trapezoidal, polygonal or semi-circular glass surfaces with a foldable or gatherable curtain, whose curtain edge, which is displaceable for closing and opening purposes, is fitted with a profile strip whose side edges adjacent to the displaceable curtain edge are guided on retaining devices, which structure is able to cover a variety of complicated and possibly irregular surface shapes both for vertical and for inclined and if necessary horizontal glass surfaces while being of a simple construction, the profile strip is divided into two or more strip sections (6, 7), which are joined together in an articulated manner. <IMAGE>
