Abstract (en)

[origin: EP0424635A1] The invention describes a method and a device for producing textile floor coverings by the pile-wire weaving technique, in which a filling warp (6) and a binding warp (5) as well as a pile warp (3) are respectively fed to the reed, characterised in that single-group or multiple-group carpet weaves by the pile-wire weaving technique form the entire background, a finer accessory material (2) being additionally added to the background by means of two or more groups, and the background and figuring threads being kept separate by a variation reed, both the background and the figure each being single-group or multiple-group, and the design increasing the background, which constitutes 100%, by the amount of the corresponding figure density. <IMAGE>
