Abstract (en)
[origin: JPH03152249A] PURPOSE: To most adequately and surely execute yarn treatment at a high operating speed by disposing movable sinkers between needles belonging to the sinkers and fixed loop-forming webs having loop forming edges extending at an angle to a knitted fabric drawing-out direction in a specific state. CONSTITUTION: The movable sinker 33 is disposed between a fixed loop-forming web 31 having the loop forming edge 35 extending at the acute angle with the knitted fabric drawing-out direction 34 viewed in the longitudinal direction of a needle bed and a needle (having a needle back surface 55 and needle head 49) belonging to the sinker 33. The edge 38 of the sinker affecting the yarn 40 is extended to the side lower than a projection 33.1 forming a bridge to cover a tooth mouth spacing 30 and to the rear of a knocking over edge 32. The edge 38 extends at an angle different from the angle that the loop forming edge 35 forms with the knitted fabric drawing-out direction 34 in the respective areas 38.1 and 38.2 and respective oscillation positions of the sinker 33.
