Abstract (en)
[origin: EP0424822A1] A machine (1) comprising: a first cutting station (4) supported on a first work surface (3); a first device (5) for feeding a first pack (6) of panels along the first work surface (3) to the first cutting station (4); a second work surface (7) in line with the first work surface (3); a slide (8) designed to travel along the longitudinal axis of the second work surface (7); designed to travel along a vertical axis; designed, at the first cutting station (4), to pick up a second pack (11) of strips (12) produced by cutting the first pack (6) along a first axis (X); and designed to transfer the second pack (11) to a portion (13) of the second work surface (7); a second cutting station (15) supported on a third work surface (14) and designed to cut the second pack (11) along a second axis (Y) perpendicular to the first axis (X); a second device (16) designed to transfer the second pack (11) from portion (13) to the second cutting station (15); and means (38 and 45) for driving the slide (8).
