Abstract (en)

The drawer consists of four side panels (4, 4', 4a, 4a') made from a single extruded aluminium draw piece, whose working profile has a substantially C-shaped section, whilst the upper and lower portions corresponding to both curved sections of the C are substantially shaped as hollow rectangular parallelepipeds. The four sides are coupled to one another by four angled elements of stiff plastic material (1, 2), provided with right angle extensions inserting into the said hollow parallelepipedal portions. The sliding (5, 6) of the two side panels of the drawer takes place on angle slide guides secured to the inside of the lateral walls of the piece of furniture in which the drawer is housed. The sliding is made easier by pairs of ball bearings (13) pivoted on the drawer and on the side guide, respectively.
