Abstract (en)
[origin: WO9012923A1] An oil arrester is constructed from specially treated fowl feathers (2), package together into a slab-like package (1), a plurality of oil arrester units being interconnected by means of a nylon string (6, 10) which is secured to a plastic anchoring support (7, 9) in said package (1), said oil arrester providing the absorption of oily and greasy substances floating over a liquid surface, further providing the expansion of the captured substance.

Abstract (fr)
La barrière pare-huile décrite est construite à partir de plumes de volatiles spécialement traitées (2), tassées ensemble en paquet sous forme de plaque (1). Plusieurs unités de barrière pare-huile sont reliées entre elles au moyen d'un fil de nylon (6, 10), lequel est fixé à un support d'ancrage en plastique (7, 9) dans ledit paquet (1). Une telle barrière pare-huile assure l'absorption de substances huileuses et grasses flottant à la surface d'un liquide, tout en empêchant l'expansion des substances ainsi capturées.
