Abstract (en)

[origin: WO9014554A1] An information display stand-board comprises a device (1) for displaying information consisting of stationary screens (2) located symmetrically in relation to the vertical geometrical axis of the stand and mounted on a base (3), as well as a projector (17) feeding the information to the device (1). At least two symmetrically located stationary screens (2) are divided into at least three cells (4, 5, 8) of which two (4, 5) are symmetrical in relation to the vertical geometrical axis of the stand and are mounted rotatably about their own vertical axes (6, 7) whereas the third cell (8) is mounted rotatably about its horizontal axis (10).
