Abstract (en)
[origin: EP0426050A2] The invention relates to a front jaw, in whose housing a release spring is accommodated which is penetrated by a connecting rod which acts via a transverse part on two bent levers retaining the front end of the boot sole. <??>In order to simplify the construction of this front jaw (1), the invention provides for the housing (2) to have at its rear end two vertical contact surfaces (2b1, 2b2) for a bearing part (10), for the axles (11a, 11b) of the two bent levers (12, 13) to be arranged in the bearing part (10), and for the two bent levers (12, 13) also to be constructed as holding-down devices for the sole. <IMAGE>
