Abstract (en)

[origin: EP0426535A1] Device for locking and driving a movable component (1) in relation to a fixed body between a first and a second position, comprising a pusher element (3), said movable component (1) comprising two shoulders (14), on which said element (103) comes respectively to bear in order to drive said movable component (1) towards one of its two positions or the other, the movable component (1) and the fixed body comprising at least one, a stop (15), and the other, a locking member (26), the cooperation of which blocks any displacement of the movable component (1), the pusher element (3) comprising a ramp intended for cooperating with the locking member (26) in order to disengage the latter from said stop (15). <IMAGE>
