Abstract (en)

[origin: EP0426575A1] The subject of the invention is a covering of thermal insulation intended to cover the exterior face of a support (1) and comprising a wall (2), made from an insulating material, fixed to the exterior face of the support (1) and a covering rendering composition (3, 5) in which a lattice-shaped reinforcement (4) is coated, the said rendering composition (3, 5) consisting of a cement mortar containing a filler, a water-based binder and a resin. According to the invention, the rendering composition (3, 5) is produced from two components which are kept separately and are mixed in the desired proportions at the moment of application, respectively a first component consisting of a cement mortar comprising the filler, the water-based binder and additives and a second component comprising, together with additives, a resin in the form of an aqueous dispersion and having a glass transition temperature in the vicinity of 0 DEG C, the proportion of the second component being at least 30% of the quantity of cement contained in the first component.
