Abstract (en)

[origin: EP0426964A1] The invention relates to a method for producing a semifinished product for the fabrication of a blossom-like rosette. Such blossom-like rosettes cannot be fabricated using known strip-type semifinished products which have a pulling member. Only loops are formed which have to be worked by hand in a complicated manner if required. A method is therefore to be proposed which employs simple means for fabricating a suitable semifinished product, with which blossom-like rosettes can be produced very simply. This is achieved in that a strip (1-13) of any desired suitably flexible material is produced in any desired manner which is provided at least in the direction of its longitudinal extension with at least one straight flexible pulling member (14-28) which is not covered by the flexible strip (1-13) in some portions of its longitudinal extension, at least one longitudinal edge of the finished strip being produced with a non-straight contour (31), and, furthermore, the free portions (30) on the pulling member (1-29) being dimensioned in terms of their length such that a desired folding size results. <IMAGE>
