Abstract (en)

[origin: EP0427025A2] Shuttering for making concrete elements, in particular bar and trough elements, with a pivotably mounted base structure and at least two side shuttering elements attached to it, limiting the concreting space, of which one is fixed to the base structure and the other can be moved away from the first to erect and remove the shuttering and which comprise side supports arranged at a distance from one another and variable shuttering boards attached to them, is characterised in that the side supports comprise at least one side shuttering element made of a base part connected to the base structure and a top part extending the base part upwards, which is attached in a pivoting manner to the base part and can be locked in the vertical basic position and at least one further position directed outwards from the concreting space.
