Abstract (en)
[origin: EP0427118A1] The invention relates to jumping safety gear having an inflatable lattice-type mounting (4), and a cover (3) which is assigned to the mounting (4) and whose top forms the jumping surface (1). In order to keep the number of external seams necessary, as a result of the production of the gear, to form the cover (3) and the mounting (4) as small as possible, the gear is so designed, according to the invention, that the rigidity of the envelope of the gear is created by the mounting (4) acting from within against the continuous cover (3), the cover (3) being detachably connected to the upper frame (6) of the mounting (4). <IMAGE>
