Abstract (en)

[origin: EP0427140A1] The present invention relates to a railway carriage body comprising, in the region of the top, two longitudinal members (20) connected by cross-members (40); in the region of the floor, two longitudinal members (10) connected, in the central part (A) of the body, by means of a floor (11); in the region of the flanks, on each side of the door apertures, a vertical member (30) connecting a top longitudinal member (20) and a floor longitudinal member (10), characterised in that each vertical member (30) consists of a profile of large cross-section, these profiles themselves alone forming the working structure in the region of the flanks. <IMAGE>
