Abstract (en)

A method and aerosol preparations are provided for removing lint, hair, and other particulate matter from fabric articles such as clothing, upholstery, or draperies. A specially formulated sprayable aerosol adhesive composition is applied to flexible sheet material, such as a paper towel, so as to splatter the surface of the sheet with tacky adherent globules of a tackified or plasticized resin without forming a continuous coating on the surface. The sprayed surface of the sheet is ready within 30 seconds for contacting with the fabric from which the particulate matter is to be removed.
