Abstract (en)
[origin: EP0428032A1] In the lid (4) of a vessel with a pouring spout (2) a flap (7) is pivotably mounted and covers the pouring spout (2) when it is at rest. The flap (7) extends with a short lever arm (9) into a guide channel (6) of the lid (4) in which a weight in the form of a ring is arranged. When the vessel is tipped, the weight moves against this lever arm (9) and opens the flap (7) automatically. <IMAGE>
