Abstract (en)
[origin: EP0428057A2] Cast-coated papers produced by the two-stage treatment with a highly polished drum performed in accordance with the present invention retain the high degrees of gloss and smoothness which are characteristic of cast-coated papers, that are free from such surface imperfections as low surface strength and uneven adhesion between the base paper and the cast-coated layer, and that have sufficiently high water content to provide improved resistance to curling and surface waviness.
