Abstract (en)
An article carrier (C) of the top gripping type comprising a tray like structure which is adapted to be applied in inverted condition to the tops of bottles (B). The carrier has a top panel (12) formed with apertures (a) which receive and retain the bottles, a pair of side wall panels (14, 16) and a pair of end wall panels (22, 24) depending from the top wall panel. Gusset panels (30, 32) are interposed between each of the end wall panels and the side wall panels of the carrier to allow corner portions of the tray like structure to conform more closely to the endmost articles to be carried. The carrier is maintained in its erected tray like form by cooperation between the corner gusset panels and upper portions of the bottles held in the carrier adjacent thereto.
