Abstract (en)
For the stirring of liquids such as paints, surface coatings or the like, which have constituents liable to separation when in containers, a stirrer is provided comprising an elongate member (1) whose operative part (2) has a cross section adapted to provide flexibility in the plane of one of its axes and rigidity in the plane of the axis transverse thereto and wherein the member is extended to a formation (3) at its end of shape adapted to be secured in the chuck of a rotary power tool.
