Abstract (en)  
[origin: US5085456A] The binding comprises a plate mounted pivotably on a ski about an axis by means of a pivot. The plate is provided with a horizontal finger, which is engaged in a bayonet groove of the pivot, with vertical play, in order to retain the plate axially on its pivot upon bending of the ski. The plate is thus not weakened by a perforation and the pivot is better protected against the formation of ice.
