Abstract (en)
[origin: WO9001669A1] A bullet (1) for a portable firearm cartridge comprises a core (2) and a jacket (3). The core (2) is made of a denser material than the jacket (3), and the core (2) and the jacket (3) interlock. To ensure high penetration and felling capacity as well as a relatively short trajectory if the target is missed, the core (2) has projections (6) extending radially outwards from its circumference to a diameter determined by the maximum diameter of the core, which interlock with the jacket (3). The jacket (3) is opened at the tip of the bullet in a manner known per se.
