Abstract (en)

[origin: EP0428872A1] Here is described a hinging device for a vehicle side door (5) consisting of a pair of internal hinges (12,14), which are fitted within the transverse bulk of a door opening with which said door cooperates, substantially coplanar with the door opening itself, and placed outside the longitudinal bulk of the door opening, laterally cantilever in relation to a perimeter edge of said door; the distance between the hinges is increased thanks to the fact that they are inclined, so as to define a door rotation axis oblique in relation to the vertical .
