Abstract (en)

[origin: EP0429713A1] Mobile railway installation (1) for receiving, delivering and transporting bulk material, in particular of the waste occurring during cleaning of the ballast bed of tracks, consisting of loading waggon (2) coupled to a train unit, with waggon bodies (5) designed to receive the bulk material and, arranged in their longitudinal direction in the bottom region, conveyor belt arrangements (6), the ends of which are arranged at a different height for transfer of the bulk material from one loading waggon (2) to the next. In the waggon body (5) of each loading waggon (2), there is arranged a sensing device (10) which is designed to emit a corresponding signal when a given filling state is reached. <IMAGE>
