Abstract (en)

A paint-dispensing device, in particular for painting gaps between tiles, comprises a main body (2) exhibiting one end portion (3) adapted to be engaged with a paint-container (5) at a feed hole (6) of said container and a second end portion (7) opposed to the first end portion (3) and provided with an outlet hole (8), a communication chamber (9) formed at the inside of the main body (2) and adapted to establish a communication between said feed hole (6) and outlet hole (8), and paint-transferring means (10) for transferring paint to the outside of the main body (2), that is from the communication chamber (9) through the outlet hole (8), in a measured quantity, onto a stripe of a given width which needs to be painted.
