Abstract (en)
[origin: EP0430091A1] Device for facilitating the boarding of continuously circulating cable cars, in particular chair lifts with headwheel entry, acceleration and/or transport means which act in the travel direction of the conveying cable which leads uphill, for example a driven rotating conveyor belt (3) with acceleration ramp (8) positioned in front of it, being provided for the skier. At least a part of the acceleration and/or transport means (3, 8) is adjustable preferably in the same direction or opposite direction of the transport direction or travel direction relative to the fixed body of the cable car station. <IMAGE>
