Abstract (en)
[origin: EP0430120A1] A stackable module (1) is illustrated and described, in particular for forming shelving walls or the like. It has a preferably rectangular base (2), a rear wall (3), having a catch device, and at least two side walls (4). Universal application and easy extendability of the stackable module (1) are achieved in that the rear wall (3) of the stackable module (1) consists of a lower (5) and an upper wall element (6) which are arranged mutually offset in such a way that an insertion slot (7) is formed as a catch device between the rear edge (K) of the base (2) and the lower wall element (5) for receiving the upper wall element (6), constructed in this region as a tongue (8), of a further stackable module (1) or another support element. <IMAGE>
