Abstract (en)

The invention provides an insulation sheath for a pipe, particularly for use in a furnace and has the object of providing ease of installation. The sheath is formed in two layers, (4, 6) the first layer (4), to contact the pipe (2) being a plurality of separate longitudinally-abutting segments (4C) and the second layer (6) also being a plurality of separate longitudinally-abutting segments (6C) fitting over a major portion of the circumference of first layer (4), the segments (6C) of the second layer overlying the joints between the segments (4C) of the first layer. The segments (4C) of the first layer are preferably in longitudinally-divided halves (4A, 4B). <IMAGE>
