Abstract (en)
A cladding system comprises a plurality of panels (1) arranged contiguous to one another and fastened to a plurality of spaced, elongate carrier rails (2) which are arranged to extend substantially parallel to one another and substantially vertically. The panels (1), which are individually removable and fully interchangeable, are fixed to the rails (2) by means of clamping assemblies (3). A seal (17) extends around the perimeter of each panel (1), and in the affixed position, the surrounding perimeter seal of one panel abuts the surrounding perimeter seal (17) of each of the four adjacent panels (1). The abutting seals (17) together form a waterproof surface which is presented to the exterior of the building. <IMAGE>
