Abstract (en)
[origin: WO9002461A1] A method for transmitting a data message to a voice/data subscriber unit (114) in a trunked voice/data communication system (100). When the subscriber unit (114) is in a voice mode, the system transmits a paging message regarding the existence of the data message via the voice channel thus, solving the problem of the voice using partly not knowing data is waiting. The system can then transmit the data message via a data channel.
