Abstract (en)

[origin: EP0431344A2] In a recorder mouthpiece, the fipple has an upper section, pointing towards the interior of the mouthpiece, which is pivotably mounted and is adjustable in the vertical direction by means of an adjusting spindle which is guided out of the recorder mouthpiece. In this recorder mouthpiece, the size of the flue can be varied by means of the adjustable section, and hence fine tuning of the sound of the recorder can be achieved. <IMAGE>
