Abstract (en)  
A key for use with a locking device comprises a profiled key blade provided with a row of V-cuts on one narrow edge and has a control element (18) accommodated for transverse movement in a bore (15) extending transversely of the key blade and opening into the opposite wide faces thereof, such that when the element is urged, be engagement of one portion thereof, in one direction so that said one end portion lies flush with one of the wide faces of the key blade, an opposite portion thereof projects outwardly beyond the other wide face of the key blade. The bore has a portion of enlarged diameter and the control element is in the form of a pin disposed in said bore and having a collar (10) freely movable in the enlarged diameter portion thereof between an end face forming the bottom of said portion and a retaining ring (11) arranged at the open end of the bore.
