Abstract (en)

[origin: EP0431994A1] This casing (6) is associated in a precise geometrical fashion with a contactor appliance whose control member (2) cooperates with a lever (7), one end (25) of which is equipped with a groove (20) able to receive this member, whereas the other end (9) is coupled up to an auxiliary switch (3). <??>This casing is advantageously used when the working travel of the contactor is greater than that required to actuate the auxiliary contacts. <IMAGE>
