Abstract (en)

In production, beginning from continuous film (P), filiform elements (EA,EB) made of weldable material are supplied, in order to form the strings; the transverse welds and cuts of the film are formed so as not to involve in the welding the region of the strings; and after the separation between the bags under production, by means of accelerated sliding with respect to said filiform elements, the filiform elements are welded to one another in pairs and cut in the welding regions in order to form annular strings. <IMAGE>
