Abstract (en)

An extrusion pulling apparatus wherein an extrusion puller (14) is guided from above and below for movement along an extrusion line from an extrusion press (12). The upper guide comprises a T-shaped beam (58) with rollers (60) mounted on the puller for rolling along vertical surfaces of the beam. The lower guide (26) is formed from a multi-face beam (4), for example, a hexagonal beam, wherein rollers (44) mounted on the puller roll on guide face surfaces which have an included angle between them of about 60 DEG . The upper and lower guides can be reversed.
